---

Bart,

My assessment of the site per our visit on 3/20/2014. This is only my opinion from talking with individuals and does not reflect any professional assessment, by a trained environmental person or an Employee of the Environmental Protection Agency.

Pictures from the Wilcox site. The pictures in the water are from Sand Creek. The rest are from the Church property, and then the Lane property, where we will be fencing the area. The picture with the 2X4 is wet and gooey. You actually sink into it if you stand there. There is another large area on the Chapman property that they don't seem to be interested in getting cleaned up. This could be an issue down the road. It appears to me we will have to do a lot of sampling in the Creek and any water ponds, (possible Fish Tissue samples) plus identify any area's that need attention all over the site. There have been people that have gotten sick, and had seizures while attending church, when it was in session on The Wilcox Site. Since moving these individuals have had no recurring problems. We may have to do testing for vapor intrusion in the Church building and home.
